

# Swagger Hub Capabilities

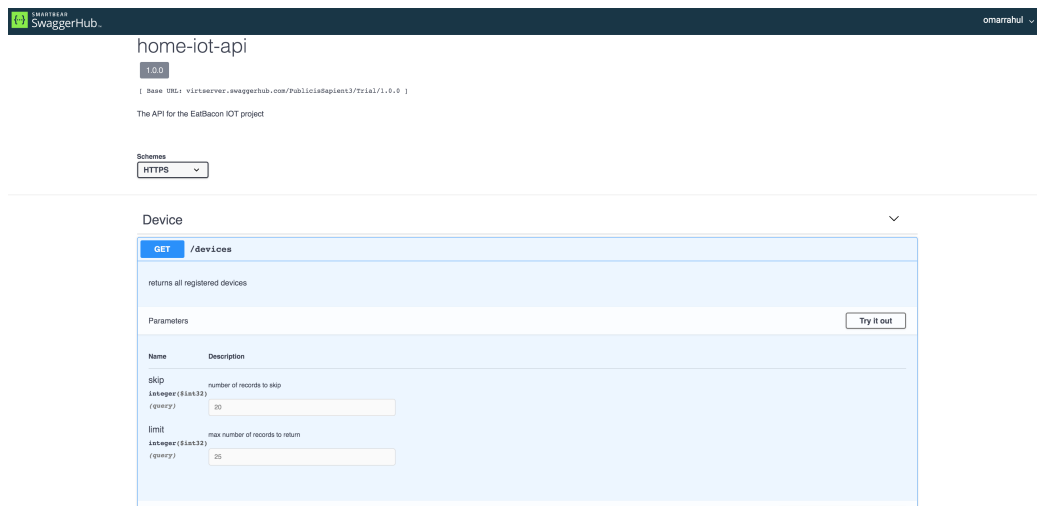

## API DESIGN

- Faster, Standardised API , Design APIs in a powerful and intuitive editor that is built for speed and efficiency, without any loss in design consistency.
- An editor to think and implement your APIs in parallel

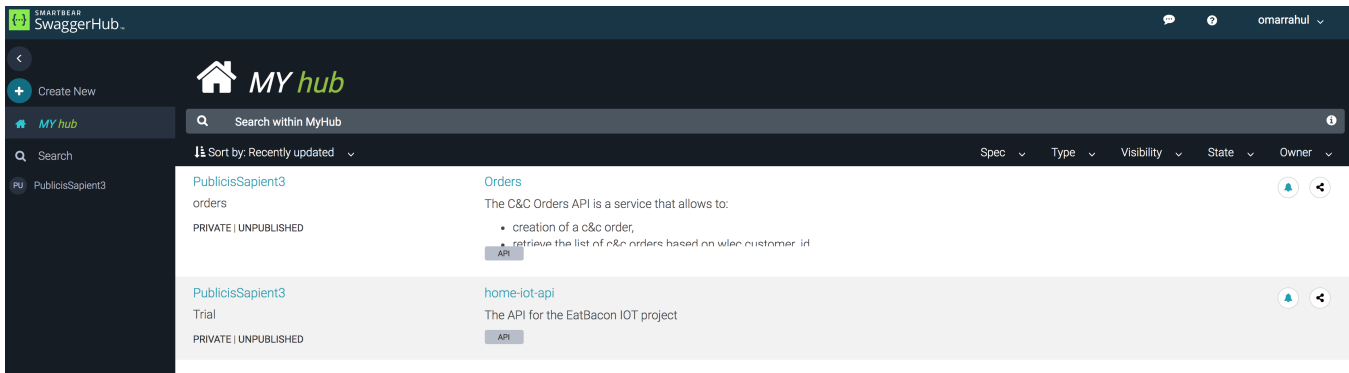

## API COLLABORATION AMONG TEAMS

- Work across teams, and collaborate without errors, on one platform that gives developers the freedom they want and architects the visibility they need.
- Try it our option on the portal helps consumers see the real as well as mocked response as per their need and the phase of development

## API DOCUMENTATION

- Writing common documentation at one place to be able to benefit as a team and everyone aboard views the same version of the story with out confusions
- All in one place to be able to check versions , state of the APIs

## API LIFECYCLE

- Easy to maintain the state of an API based on which phase the API is in (E.g Exploration , Draft , Published on test , Published on Prod)
- Maintaining mock versions and API versions is easier.
- Generate the skeleton code right from the portal to accelerate the development
